## Stainless steel

High-quality steel (heat and chemical resistant), for example AISI 304 (TI) / 316 (TI) (L), is used in piping systems for the following industries:

- **Engine-building:** Gas inlet systems and exhaust gas systems for building diesel and dual fuel engines;
- **Module-building:** Research into gas, inert gas, water treatment and fresh water processing;
- **Ship-building:** Cargo handling systems for chemical, oil and gas tankers, exhaust gas and heating systems.

Special attention is paid to materials and components suitable for cryogenic applications (-162° C at atmospheric pressure and impact value suitable for <-50° C.
